THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

### **DETAILED ACTION**

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 22, 2011 has been entered.

#### ***Allowable Subject Matter***

2. Claims 1, 4-6, 8, 9, 12, 16, 18, 20-35, 37, and 39-49 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Re claims 1 and 45: The prior art of record individually or in combination fails to teach the fluorometer and method for detecting the level of fluorescent material in a body of water as claimed, more specifically comprising: an excitation system comprising one or more light emitting diodes, further comprising a means to cause excitation light from the light emitting diodes during use to form a generally conical divergent beam projecting from the fluorometer, the beam causing means comprises at least one collimating lens, the excitation system further comprises a means for modulating said beam with a modulation signal having a modulating frequency, a detection system with a lens for detecting a generally conical detection volume that converges in a direction towards the fluorometer and at least partially overlap the

generally conical divergent beam, the detection system receives light and converts it into an electrical signal, said detection system further includes means for detecting, in the electrical signal produced by said light receiving and converting means, a signal component of substantially the same frequency as said modulation frequency, said detecting means including means for performing spectral analysis of said electrical signal and means for determining the value of a spectral component of said electrical signal corresponding to said modulation frequency, wherein said detection system is arranged to determine the level of fluorescent material present in said body of water depending on said value of said spectral component, such that the fluorometer is capable of detecting fluorescent material located remotely from the fluorometer in said body of water.

Claims 4-6, 8, 9, 12, 16, 18, 20-35, 37, 39-41, 44, 46, 47, and 49 are allowed because of their dependency on claims 1 and 45.

Re claim 42: The prior art of record individually or in combination fails to teach the fluorometer for detecting the level of fluorescent material in a body of water as claimed, more specifically comprising: an excitation system comprising one or more light emitting diodes, further comprising a means to cause excitation light from the light emitting diodes during use to form a generally conical divergent beam projecting from the fluorometer, the beam causing means comprises at least one collimating lens, the excitation system further comprises a means for modulating said beam with a modulation signal having a modulating frequency, a detection system with a lens for detecting a generally conical detection volume that converges in a direction towards the

fluorometer and at least partially overlap the generally conical divergent beam, the detection system receives light and converts it into an electrical signal, said detection system further includes means for detecting, in the electrical signal produced by said light receiving and converting means, a signal component of substantially the same frequency as said modulation frequency, said detection system further includes means for detecting, in the electrical signal produced by said light receiving and converting means, a signal component of substantially the same frequency as said modulation frequency, said detecting means including means for performing spectral analysis of said electrical signal and means for determining the value of a spectral component of said electrical signal corresponding to said modulation frequency, wherein said detection system is arranged to determine the level of fluorescent material present in said body of water depending on said value of said spectral component such that the fluorometer is capable of detecting fluorescent material located remotely from the fluorometer at distances of up to several meters from the fluorometer in said body of water, and wherein the excitation system and the detection system are each provided in a respective housing, the respective housings being located adjacent one another and arranged such that there is an overlap, during use, between said generally conical divergent beam emanating from the excitation system housing and said generally conical convergent detection volume of the detection system housing, and wherein the excitation system and the detection system are each provided in a respective housing, the respective housings being located adjacent one another and arranged such that there is an overlap, during use, between said generally conical divergent beam

Art Unit: 2878

emanating from the excitation system housing and said generally conical convergent detection volume of the detection system housing, and wherein the respective housings have a respective longitudinal axis, said longitudinal axes being substantially parallel with one another, and said generally conical divergent beam and said generally conical convergent detection volume are substantially aligned with said respective longitudinal axis.

Claims 43 and 48 are allowed because of their dependency on claim 42.

The closest pieces of art have been mentioned previously in other office actions.

Other close art that has not been previously mention is Wilkof et al. (US 20050020926), who teaches a fluorometer that scans LEDs () to form a conical divergent beam over time (paragraph 19 and 20) in order to detect scattered light from an area (see fig. 1 and a FOV is two dimensional claim 21) within a human body or elsewhere (paragraph 10). Some embodiments can be used to detect fluorescence (paragraph 175). Wolkof doesn't teach detection up to several meters and does not specifically teach detecting the level of fluorescent material within the body.

Another piece of art is Holland (US 20050098713), who teaches fluorometer to detect fluorescence (paragraph 11), the device uses LEDs and collimated lenses to send an unfocused beam out several feet (paragraph 42 and abstract), the light emitting diodes are modulated (paragraph 46 and 47) the detector detects fluorescence then analyzes the signal in a processor (paragraph 10). Holland does not specifically teach the detector including means for performing spectral analysis of said electrical signal and means for determining the value of a spectral component of said electrical signal

Art Unit: 2878

corresponding to said modulation frequency, wherein said detection system is arranged to determine the level of fluorescent material present in said body of water depending on said value of said spectral component, such that the fluorometer is capable of detecting fluorescent material located remotely from the fluorometer in said body of water.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Arguments***

4. Applicant's arguments, see Arguments, filed February 22, 2011, with respect to claims 1, 42 and 45 have been fully considered and are persuasive. The rejection of the claims and their dependents has been withdrawn.
